1. Description

1.1 General Description

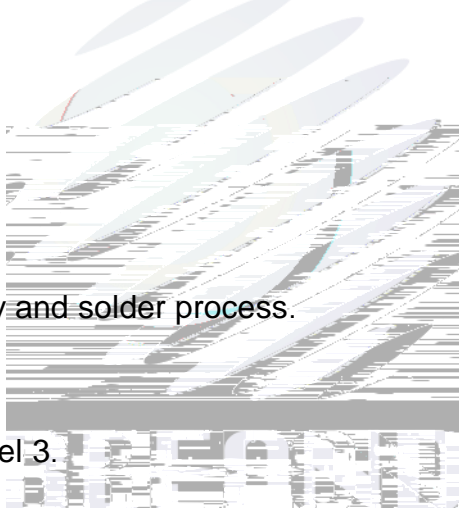

This production use the PLCC-2 package outline size 2.8*3.5*0.65mm

2.8*3.5*0.65mm

1.2 Features

- ▶ PLCC package.
- ▶ Viewing angle:120° .
- ▶ Suitable for all SMT assembly and solder process.
- ▶ Available on tape and reel.
- ▶ Moisture sensitivity level: Level 3.
- ▶ RoHS compliant.

1.3 Application

- ▶ Ultraviolet disinfection .
- ▶ UV Curing .
- ▶ UV Ink Curing .
- ▶ Nail care.
- ▶ General use.

1.4 Package Dimension

Notes

All dimensions units are millimeters.

All dimensions tolerances are $\pm 0.2\text{mm}$ unless otherwise noted.

1.5 Product Parameters

Table 1-1 Electrical / Optical Characteristics at Ts=25°C

Item	Symbol	Test Condition	Code	Value			Unit
				Min.	Typ	Max.	
Forward Voltage	V_F	$I_F=150\text{mA}$	B11	3.0	---	3.2	V
			B12	3.2	---	3.4	
			B13	3.4	---	3.6	
			B14	3.6	---	3.8	
			B15	3.8	---	4.0	
Reverse Current	I_R	$V_R=5\text{V}$	---	---	---	5	uA
Total radiant flux RP32E0-UEY-SR (380-390nm)	Φ_e	$I_F=150\text{mA}$	1B26	90	---	112	mW
			1B27	112	---	140	
			1B28	140	---	180	
Total radiant flux RP32E0-UHY-SR (390-400nm)	Φ_e	$I_F=150\text{mA}$	1B26	90	---	112	mW
			1B27	112	---	140	
			1B28	140	---	180	
Total radiant flux RP32E0-UIY-SR (400-410nm)	Φ_e	$I_F=150\text{mA}$	1B26	90	---	112	mW
			1B27	112	---	140	
			1B28	140	---	180	
Viewing Angle	2θ1/2	$I_F=150\text{mA}$	---	---	120	---	deg
Thermal Resistance.	R_{THJ-S}	$I_F=150\text{mA}$	---	---	30	---	/W

1.6 Typical optical characteristics curves

2.4 Reliability Test Items And Conditions

Table 2-3 Reliability Test Items And Conditions

2.5 Criteria For Judging Damage

Table 2-4 Criteria For Judging Damage

Test Items	Symbol	Test Condition	Criteria For Judgement	
			Min.	Max.
Forward Voltage	V_F	$I_F=150mA$	-	U.S.L*)x1.1
Reverse Current	I_R	$V_R = 5V$	-	U.S.L*)x2.0
Total radiant flux	Φ_e	$I_F=150mA$	L.S.L*)x0.7	-

3. SMT Reflow Soldering Instructions SMT 回流焊说明

3.1 SMT Reflow Soldering Instructions SMT

Fig.3-1 SMT Reflow Soldering Instructions

Table 3-1 SMT Reflow Soldering Instructions

Average temperature rise speed	T_{smax} T_P	Max 3 °C/ s	3 °C/
Preheating: minimum temperature	(T_{smin})	150 °C	
Preheating: Max temperature	(T_{smax})	200 °C	
Preheating: Time	T_{smin} T_{smax}	60s-120s	60 - 120
Time limited to maintain high temperature: the temperature (T_L)		217 °C	
Time limited to maintain high temperature: The Time (t_L)		Max 60s	60
Peak /Classification of temperature:	/ (T_P)	260 °C	
Time limit classification of peak temperature time t_p		Max 10s	10
Hold time within 5 °C with the actual peak temperature (T_P) 5 °C		Max 30s	30
Cooling speed		Max 6 °C/ s	6 °C/
Needed time from 25 °C to T_p 25 °C		Max 8 minutes	8

Notes

(1)Reflow soldering should not be done more than twice. If more than 24 hours between the two solderings , LED will be damaged.

(2)When soldering , do not put stress on the LEDs during heating.

3.1.1 Soldering Iron

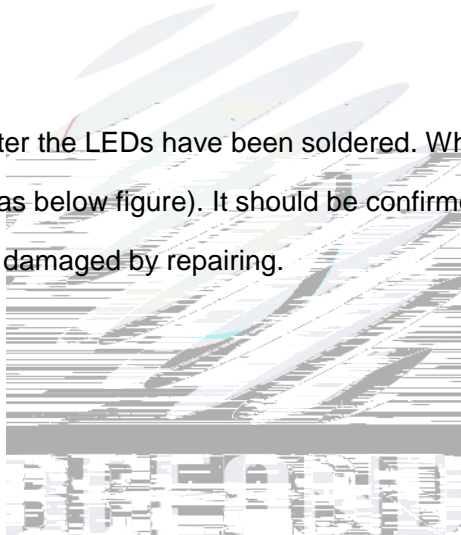

(1) When do soldering by hand, keep the temperature of iron below less 300 less than 3 seconds.

(2) Soldering by hand should be done only one time.

3.1.2 Repairing

Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable,a double-head soldering iron should be used (as below figure). It should be confirmed in advance whether the characteristics of LEDs will or not be damaged by repairing.

LED

3.1.3 Cautions

(1) The encapsulated material of the LEDs is silicone. Therefore the LEDs have a soft surface on the top of package. The pressure to the top surface will be impacted on the reliability of the LEDs. Precautions should be taken to avoid the strong pressure on the encapsulated part. So when use the picking up nozzle, the pressure on the silicone resin should be proper. LED

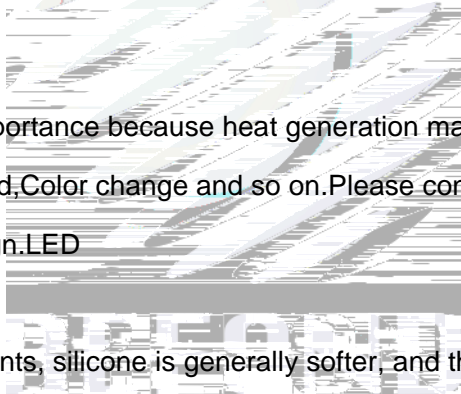

(2) Components should not be mounted on warped (non coplanar) portion of PCB. After soldering, do not warp the circuit board.LED

(3) Do not apply mechanical force or excess vibration during the cooling process to normal temperature after soldering. Do not rapidly cool device after soldering.

Fig 4-1 Operate Method

(5) In designing a circuit, the current through each LED can not exceed the absolute maximum rating specified for each LED. In the meanwhile, resistors for protection should be applied, otherwise slight voltage shift will cause big current change, burn out may happen. The driving circuit must be designed to allow forward voltage only when it is ON or OFF. If the reverse voltage is applied to LED, migration can be generated resulting in LED damage.

(6) Thermal Design is paramount importance because heat generation may result in the Characteristics decline, such as brightness decreased, Color change and so on. Please consider the heat generation of the LEDs when making the system design. LED

(7) Compared to standard encapsulants, silicone is generally softer, and the surface is more likely to attract dust, requiring special care during processing. In cases where a minimal level of dirt and dust particles cannot be guaranteed, a suitable cleaning solution must be applied to the surface after the soldering of components. Refond suggests using isopropyl alcohol for cleaning. In case other solvents are used, it must be assured that these solvents do not dissolve the package or resin. Ultrasonic cleaning is not recommended. Ultrasonic cleaning may cause damage to the LED.

Declare

This specification is written both in English and in Chinese and the latter is formal.
